**Introductions/announcements Presentations**

- Minutes and agenda from June meeting are approved.
- Community Potluck Picnic – Saturday 7/15/23 6:30 pm
- Meeting tonight is going to be regarding the community's questions for the sewer treatment project. Thank you to John, Evan and Greg for being at our meeting and available to answer additional questions from our community.
  - John Ellermann Director RCPW
  - Evan McMillan Assistant Director RCPW
  - Greg McKinley Riley County Commissioner

The UP community was asked to submit questions to the board since the June meeting regarding the sewer treatment project. Those questions were compiled and submitted in advance to Evan McMillan. Evan in turn answered the questions from the community prior to this meeting and those questions and answers were emailed out to the community. Those questions and answers are attached to these meeting minutes.

The three adjacent landowners to University Park were contacted and although verbally were interested they decided they are not interested in letting the County take core samples for a future lagoon. The county has identified two areas as possibilities for the lagoon site and both areas are on the golf course or adjacent to the burn pile.

Community additional questions (Riley County – RC answer is in parentheses):

How were the areas picked, how do they determine things like distance from ground water, active wells, bedrock issues, and funding, Additional questions regarding adjoining ground and can it be annexed and the size of the lagoon. (RC and SMH consultants are carefully reviewing the GIS maps for locations that are suitable in all areas)

One resident commented that the lagoon needs wind movement and wave action – the burn pile area wouldn't be windy enough in his opinion. (RC agreed) Difference between a discharge system (Randolph) – 5 acres and non discharge system (UP) 8 acres includes land. Do we cause problems with possible funding if we don't have site and design ready, what are ballpark costs? Should we utilize the old pump stations for anything – will there be backup generators for the lagoon? Can we use the basin for an overflow? One resident is in a quandary – he owns property in Lakeside and had enough property to build a septic but because he is too close to the public sewer he can't have a septic per RC. The new lagoon will support UP residents and 20% expansion for UP residents and doesn't include Lakeside. He will meet separately with John E from the county.

There was a lot of frustration about the money UP residents spent on the previous system that was supposed to work for decades. What was the reason Lakeside didn't get their sewer done. (RC answer – Covid/inflation drove prices to skyrocket).

Questions regarding what lots are buildable, how will people be charged. Can we make the lagoon bigger to be able to encompass more future residents. (John from RC said there is a fine line between too much and too little)

Evan from RC assured the community that this is his #1 priority

John from RC assured that everyone connected with a house now will have a future connection.

Evan assured the community that he will keep the communication open to the board so we can make sure the community is aware of each step.

Meeting adjourned at 8:15.
