Hello All,

An update on the project:

The geotechnical report showed that the existing soil, when mixed with bentonite, will meet KDHE's requirements for the lagoon liner. With that news, the engineer has started design of the lagoon and additional lift stations. As mentioned previously, the lagoon will be placed directly West of the water tower.

That is all for this update, I will send out another update in the next few weeks as the design progresses.

Thanks and have a great week,

Evan McMillan
